

Bowdry Instructions:

To Use:

- Lift Bowdry into horizontal position.
- Push down on handle of Bowdry to lift sponge and wheel Bowdry to the area with standing water ***“Dragging” the Bowdry round will wear out the sponge and pull it off***
- Loosen the black taps securing the metal squeezing bar and slide bar forward so that it is pushing against the sponge foam and secure in place by tightening all four black taps
- Push Bowdry in straight lines across the standing water. ***Each time you change direction push on the handle to use the wheels to turn around so the sponge is not ‘dragged’ round***

To Empty:

- Wheel Bowdry to the nearest court gate
- Remove bung (RHS base of water tank) and empty onto suitable path by tipping Bowdry
- ***Replace the bung***

To Finish:

- Loosen off the black taps and pull back the squeeze bar so it is not resting on the foam sponge
- Wheel Bowdry back to its ‘home’ beside the net post on court 1 or court 8
- Tip Bowdry onto its side ‘resting position’ (to avoid pressure on the sponge or it freezing and sticking to the court)
